

Building Community Capacity for Water Trail Development

Water trails are networks of points along the water that people can access using human-powered boats, but they are more than that. To NPS staffer Jerry Willis, they can change a community's perception about its local waterways, particularly urban waters that have been neglected and polluted over the years.

"Water trails are a wonderful strategy to get people to look at these rivers in a different way," he says. "They are a foot in the door. We can start talking about creating access points for people to get to the river, stream bank restoration, and replacing invasive speices. If you bring people to the edge of the river, you'll create a new generation of stewards for these often forgotten resources."

NPS RTCA Water Trail Tools:

Staff can provide resources for and examples of water trail plans, missions and visions, access strategies, traits of successful water trails, site surveys, landowner agreements, and brochures and guides. Visit:

www.nps.gov/ncrc/portals/rivers/projpg/watertrails

Online tools include:

Logical Lasting Launches

Design guidance for developing canoe and kayak launches; case examples, designs, and photos are included.

Case Studies of Water Trail Impacts on Rural Communities

Comparative analysis of rural communities with calm water trails. Case studies illustrate impacts of water trails; trends are drawn from community economic development associated with water trails.
